EXP.NO:4	Data Modelling and Form Design

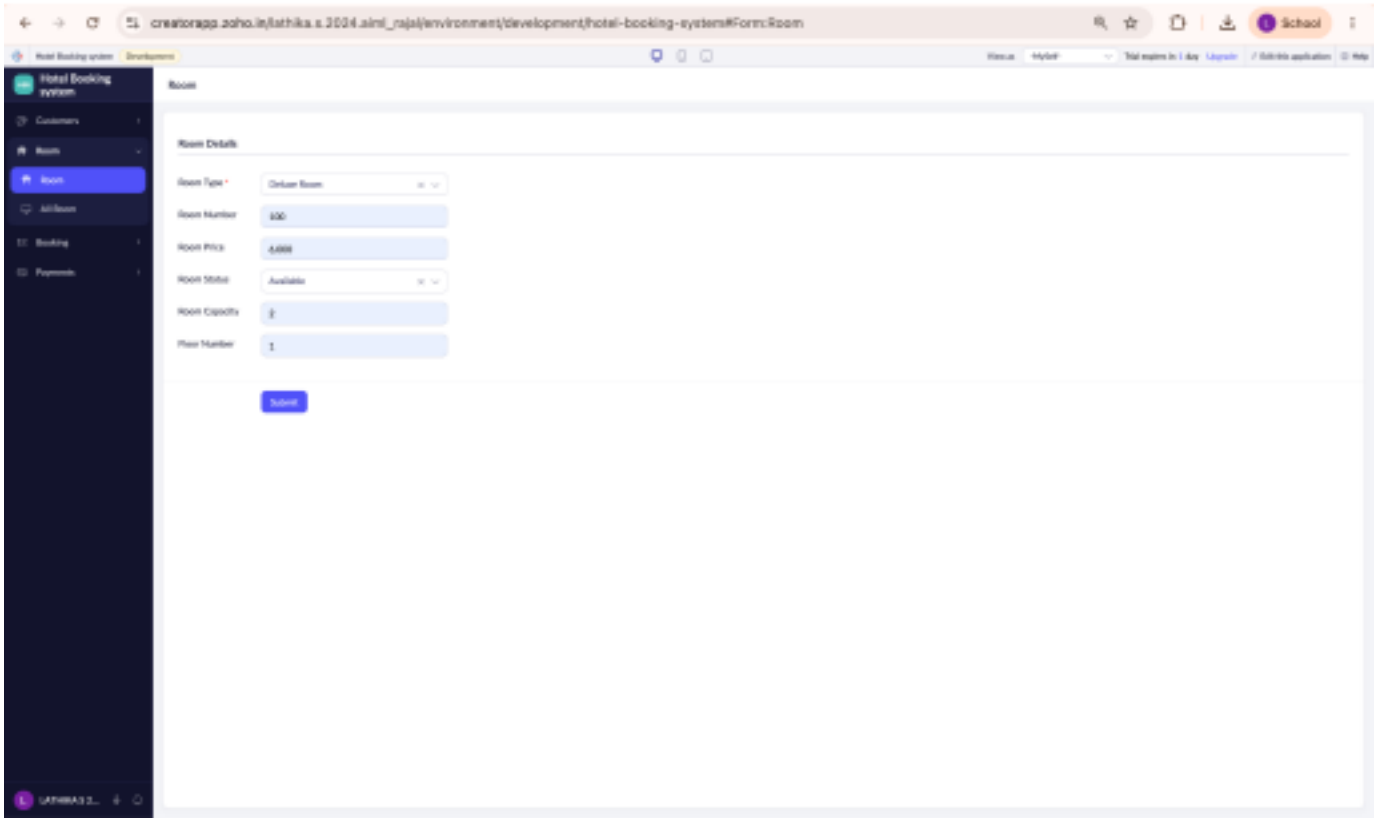

Aim

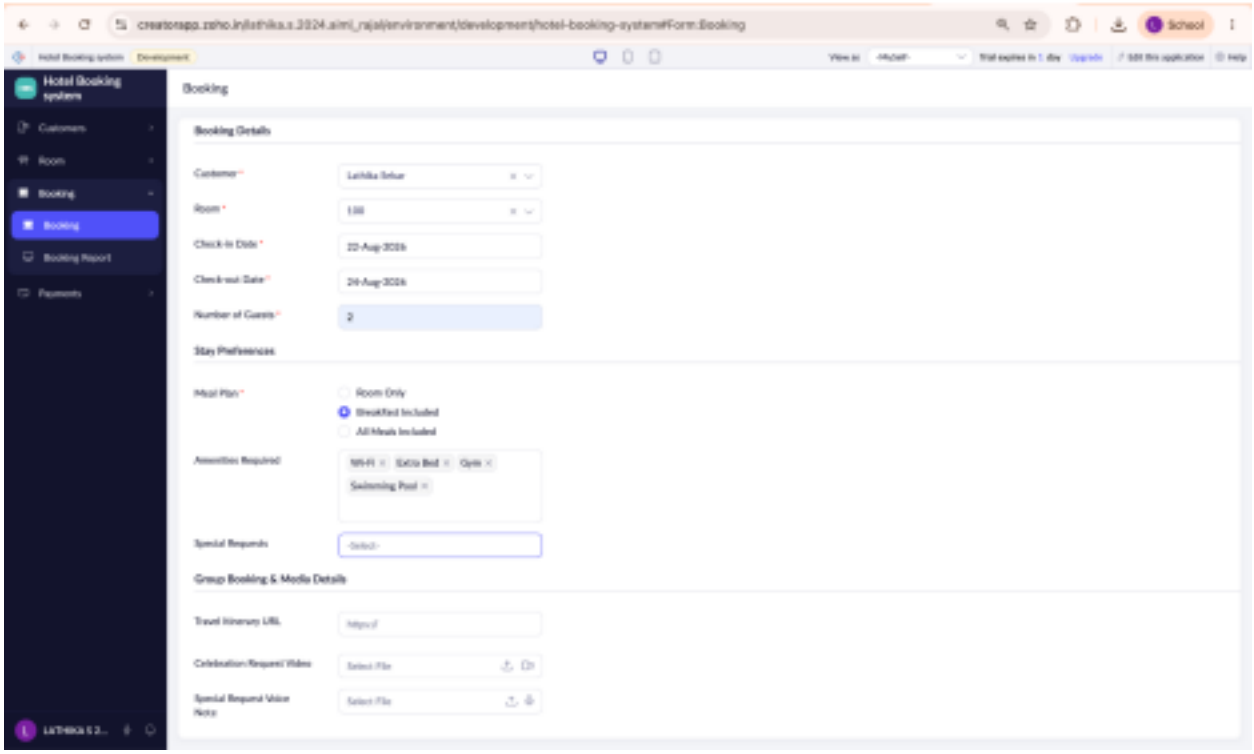

To design the data model and create forms for the Hotel Booking System using Zoho Creator.

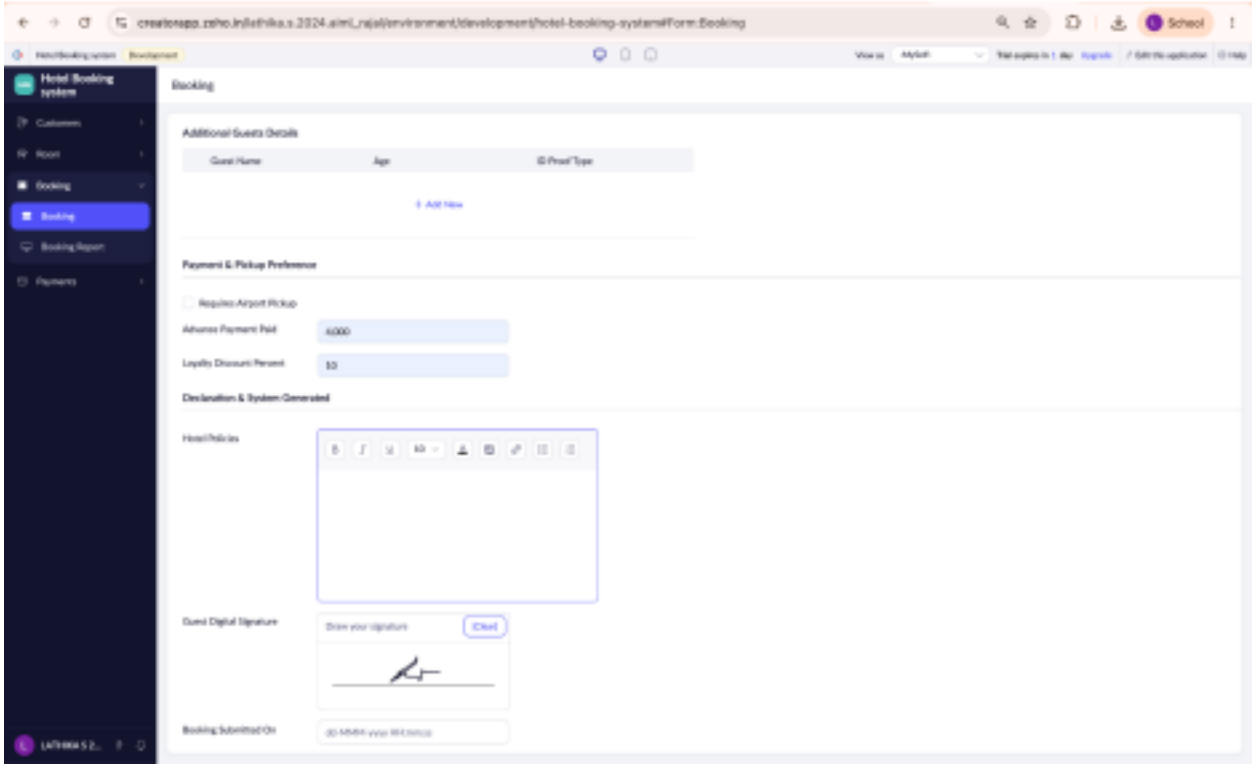

Procedure

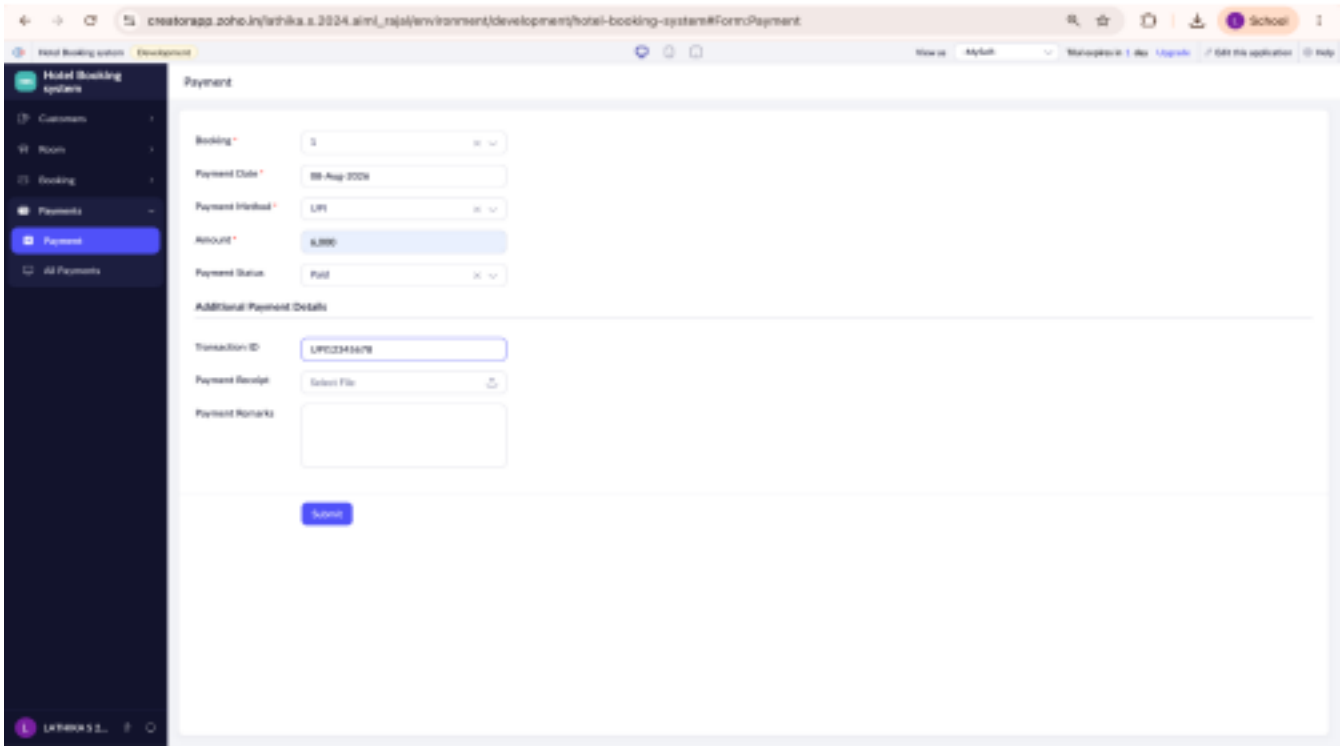

1. Logged in to the **Zoho Creator** account.
2. Opened the **Hotel Booking System** application.
3. Created a **Customer** form using the drag-and-drop form builder.
4. Added customer fields such as **Customer Name, Phone Number, Email, Address, Identity Details, Check-in Date, Check-in Time, Room Preference, Meal Preference, Special Requests, and Terms & Conditions**.
5. Saved the Customer form and verified that all fields were displayed correctly.
6. Created a **Room** form.
7. Added room-related fields such as **Room Type, Room Number, Room Price, Room Status, Room Capacity, and Floor Number**.
8. Saved the Room form.
9. Created a **Booking** form to manage hotel reservations.
10. Added **lookup fields** to link the Customer and Room forms with the Booking form. 11. Configured the required field properties and validation rules.
12. Tested the forms by entering sample data.
13. Verified that the data was stored successfully and that the relationships between the forms worked correctly.
14. Saved the application and confirmed the successful creation of the data model.

Observation

The Customer, Room, and Booking forms were created successfully using suitable field types. Lookup fields established relationships between the forms, making data entry simple and organized.

Conclusion

The experiment demonstrated how Zoho Creator simplifies data modelling and form design using its visual interface. The Customer, Room, and Booking forms were successfully connected, providing a well-organized structure for the Hotel Booking System.
